"Genetic defect of bilirubin UDP-glucuronosyltransferase in the hyperbilirubinemic Gunn rat.";

Biochem. Biophys. Res. Commun. 177:1161-1164(1991).

-I- FUNCTION: UDPGT IS OF MAJOR IMPORTANCE IN THE CONJUGATION AND SUBSEQUENT ELIMINATION OF POTENTIALLY TOXIC XENOBIOTICS AND ENDOCEMOUS COMPOUNDS.

-I- CATALYTIC ACTIVITY: UDP-GLUCURONATE + ACCEPTOR = UDP + ACCEPTOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1: /SIDSI/gcgdata/geneseq/geneseqp-embl/AA1980.DAT:*

                                                                                                                                                          This peptide motif is found in zyxin, vinculin and other focal adhesion proteins containing an ActA-like motif. The N-terminal protein of novel murine Mena (mammalian Ena) protein (see AAW37148) contains an Ena-VASP homology domain (EVH) that directs the proper localisation of Mena to focal contacts via directed protein-protein interactions with zyxin, vinculin etc. This suggests that the EPPPP motif may comprise the core recognition site in EVH1 ligands. Based on the disclosed Mena and EV1 genes (see AAW2996-98) and proteins (see AAW37148-53), a variety of methods and compositions are provided for screening, isolating and characterising endogenous and exogenous factors, drugs and therapeutic agents useful to evaluate and/or control cytoskeletal dynamic events involved in normal and abhormal cell morphology, adhesion, motility, growth and/or
                                  Detection of modulators of Mena and Ena-VASP-like genes and proteins - used in control of cytoskeletal dynamic events in normal and abnormal cell morphology, adhesion, motility, growth and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fyb/SLAP protein; EVH1 domain; cytoskeletal rearrangement;

rearrangement in a cell, or T cell response to T cell receptor
rearrangement in a cell, or T cell response to T cell receptor
stimulation. The method comprises contacting the cell or T cell with
a Fyb/SLAP complex modulator sufficient to modulate the formation
of a complex of an Ena/VASP protein and a Fyb/SLAP protein. The
method is useful for modulating cytoskeletal rearrangement in a cell
such as a lymphocyte, preferably a T cell, a macrophage or a cell
cragment such as a platelet and for modulating T cell response to a cell
response is inhibited in a subject having or is at risk of developing infectious disease or cancer and T cell
response is inhibited in a subject having or is at risk of developing an
autoimmune disease or a condition characterized by inflammation. A
composition comprising a Fyb/SLAP complex inhibitor is useful for
increasing platelet aggregation for promoting wound healing or
                                                                                                         The present sequence represents a Fyb/SLAP complex inhibitor. Fyb/SLAP proteins are ligands for the EVH1 domains of Ena(enabled)/vasodilator-stimulated phosphoprotein (VASP) proteins. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell migration; Enay(NSP; wound healing; actin polymerisation; neurodegeneration; Alzheimer's disease; Down Syndrome; trauma; stroke; Parkinson's disease; amyotrophic lateral sclerosis; ALS; epilepsy; Huntington's disease; ALS-Parkinsonism-dementia complex; bulbar palsy; Tourettes syndrome; hypoglycenia; Creutzfeldt-Jakob disease; korsakoff's syndrome; hearing; memory; brain damage; senile dementia; inflammatory disorder; arthritis; allergy; gout; organ transplant;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   QQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of preventing mammalian cell migration, comprising inducing a functional Ena(enabled)/vasodilator-stimulated phosphoprotein (VASP) or promoting cell migration comprising depleting functional Ena/VASP protein in the mammalian cell. The method is useful for promoting mammalian cell. The method is useful for preventing or promoting mammalian cell. The method is useful cor preventing or promoting mammalian cell migration, preferably tumour cell migration in vitro or in vivo and to prevent tumour cell metastasis in a subject. An Ena/VASP activator or inhibitor is useful for promoting wound healing preferably fibroblasts or nerve cells of a tissue type with the inhibitor to promote actin polymerisation and tissue formation on a scaffold. The inhibitor is also useful for preventing neurodegeneration such as in Alzheimer's disease, Down Syndrome, Parkinson's disease, amyotrophic lateral sclerosis (ALS), stroke, direct trauma, Hunthigton's disease, epilepsy, ALS-Parkinsonism-dementia complex, progressive superanuclear palsy, progressive bulbar palsy, spinomuscular atrophy, cerebral amyloidosis, pick's atrophy, Retts cerebral articophy, cerebral amyloidosis, pick's atrophy, Retts cerebral articophy, cerebral amyloidosis, pick's atrophy, retts cerebral articophy and sordeneria as subject having or at risk of developing a learning disorder such as subject having or at risk of developing a learning disorder such as subject having or at risk of developing a learning and memory in a subject having or at risk of developing a learning and memory in a synapse. Ena/VASP activator is useful for disrupting the activity of Ena/VASP protein and the activator is administered in an amount to promote Ena/VASP protein in minume or namatory disorder and and peace and this is useful for treating and preventing inflammatory disorders such as arthritis, allergy, gout, organ transplant, metasting center propresent appreased by an adject or propresenting disorder such as arthritis, allergy, gout, organ transpl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

The sequences represented by AAR80046 and AAR80048-R80059 are substrates for the novel peptidase of the invention. The peptidase hydrolyses P-P-P-D-P-P, and P-P and recognises the proline at the second residue from the N-terminal of a peptide to release the N-terminal amino acid. The enzyme's activity is stimulated with MnC12 and inhibited with o-phenanthroline and 2-mercaptoethanol. The peptidase is useful for the hydrolysis of proline containing physiologically active peptidas, oligoproline and proline rich proteins in the living body, particularly in the brain of mammals. The peptidase is useful for the prevention and treatment of proline rich protein related diseases and study of cerebral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                  140 kDa peptidase hydrolyses proline rich proteins – useful for prevention and treatment of diseases related to proline rich proteins and studies of cerebral functions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 140 kDa peptidase hydrolyses proline rich proteins – useful for prevention and treatment of diseases related to proline rich

The peptidase hydrolyses P-P-P. P-P. and P-P and recognises the proline at the second residue from the N-terminal of a peptide to release the N-terminal amino acid. The enzyme's activity is stimulated with MnCl2 and inhibited with o-phenanthroline and 2-mercaptochtanol. The peptidase is useful for the hydrolysis of proline containing physlologically active peptides,
                                                                            for the novel peptidase of the invention. The peptidase hydrolyses p-p-p. p-p-p, and p-p and recognises the proline at the second residue from the N-terminal of peptide to release the N-terminal amino acid. The enzyme's activity is stimulated with Mncl2 and inhibited with o-phenanthroline and 2-mercaptoethanol. The peptidase is useful for the hydrolysis of proline containing physiologically active peptidas, oligoproline and proline rich proteins in the living body, particularly in the brain of mammals. The peptidase is useful for the prevention and treatment of proline rich protein related diseases and study of cerebral

Peptides AAW59229-W59262 are used for the synthesis of diverse molecular sequences on substrates, using a procedure based on known solid phase synthesis principles. Initially a first 'monomer' (nucleotide or amino acid) is bound to synthesis sites (through a tether molecule). Using a series of masking steps, a second monomer is added to the first and also to new synthesis sites (i.e. bound to the carrier as well as in addition to the first monomer). This is repeated to obtain a series of polymers
oligoproline and proline rich proteins in the living body, particularly in the brain of mammals. The peptidase is useful for the prevention and treatment of proline rich protein related diseases and study of cerebral
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cyclic nucleic acid and polypeptide arrays - useful for determining binding characteristics of a specific molecule to variations of the nucleic acid or polypeptide in the array
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   benzotriazol-1-yloxytris-(dimethylamino)
phosphonium hexafluorophosphate (BOP)"

WBP-1 (AAR97695) and WBP-2 (AAR97696) are ligands for the WW signalling domain of human Yes proto-oncogene associated protein, YAP (AAR97670). The PY motif is involved in binding the WBP2 to the WW domain. It does not conform to the consensus of SH3-binding proline-rich domains, but appears to require a different consensus (AAR97693) sequence for but appears to require a different consensus (AAR97693) sequence for for a particular WW domain. Mutagenesis of any of the residues of the motif (see AAR97698-700 and AAR98322-23) abolished or

The present milf is found in the proline rich regions of WBP-1 and WBP-2 proteins. Peptides containing this residue have been shown to bind the proteins. Peptides containing this residue have been shown to bind the SHA domain. Dut not the WW domain from dystrophin or to a panel of SH3 domains. The WW domain is a small functional domain. Its name is derived from the observation that two tryptophan residues, one in the amino terminal portion of the WW domain and one in the carboxyl terminal portion, are conserved. Most proteins containing WW domains have a portion, are conserved. Most proteins containing wW domain are organisation of the cytoskeleton. Polypeptides containing a WM domain are identified by treating a multivalent recognition unit complex that has selective binding affinity for a WW domain, with many polypeptides and containing wW domains are used for targeted drug screening. I.e. to identify potential modulators of specific WW domain interactions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to neurotrophic low molecular weight, small molecule peptidic cyclophilin inhibitor compounds having an affinity for cyclophilin-type immunophilins, and their use as inhibitors of the enzyme activity associated with immunophilin proteins, particularly peptidyl-prolyl isomerase, or rotamase, enzyme activity. Tetrapeptide and pentapeptide combinatorial libraries were used to map the substrate specificity of the enzyme cyclophilin. Pools of tetrapeptide and pentapeptide substrates were generated and their potencies in binding to cyclophilin A were evaluated by examining the inhibition of peptidyl-prolyl isomerase activity. Positional scanning thechnique was used to determine the optimal amino acid(s) for each position of the tetra- or penta-peptide. The present sequence represents one of the peptide pools
                                                                                                                                                                                                                                                                                                                     polyprolyl; cyclophilin; inhibitor; neurotrophic compound; PPI; piptidy-prolyl isomerase; rotamase; immunophilin protein; degeneration; neuronal damage; combinatorial library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "equimolar mixtures of 18 amino acids (all naturally occurring amino acids except trypotophan and cysteine), C-terminal amide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Effecting neuronal activity in mammals - by administrating tetra-
and penta- peptide inhibitors of cyclophilin and rotamase enzyme,
useful in treatment of neuronal damage or degeneration disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

SERK may be used as part of a method of producing appomictic seeds comprising: (a) transforming plant material with a nucleotide sequence encoding a protein which in active form in a cell or cell membrane renders the cell embryogenit; (b) regenerating the transformed material into plants or carpel-containing plant parts; and (c) expressing the sequence in the vicinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of the embryo sac. The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant breeding programs. Controllable and reproducible apomixis provides many advantages in plant improvement and cultivar development in the case that sexual plants are available as crosses with the apomictic plant. Apomixis provides for true-breeding, seed propagated hybrids and could shorten and simplify the breeding process so that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated. Apomixis allows plant breeders to develop cultivars with specific stable traits for such characteristics as height, seed and forage quality and maturity.

The present invention describes nucleotide compounds of formula (I): 0.4°-CO-R1(NH-W2).NH(CO-CHR2-NR3)m-W1 (I) 0 = mono or oligonucleotide; V = C triple bond C-(CH2)nNH or CH=CH(CH2)n2NH; nl, n2, m = integer; Rl = trivalent group; R2, R3 = H or hydrocarbyl; or CHR2NR3 = a ring; W1, W2 = fluorescent group. Also described is the use of RNA polymerase and a mnon or oligonucleotide compound (I) as initiator in a chain terminator method for DNA base sequencing, (I') has: (i) a 5'-phosphate group; and (ii) two reporters capable of serving as a donor and an acceptor in energy transfer. (I') including (I) have improved uptake efficiency by RNA polymerases and can so be used with RNA polymerases as terminators in DNA base sequencing methods. The present sequence represents a peptide used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell migration; Ena/VASP; wound healing; actin polymerisation; neurodegeneration; Alzheimer's disease; Down Syndrome; trauna; stroke; Parkinson's disease; amyotrophic lateral sclerosis; ALS; epilepsy; Huntington's disease; ALS-Parkinsonism-dementia complex; bulbar palsy; Tourettes syndrome; hypoglycaemia; hypoxia; Creutzfeldt-Jakob disease; Korsakoff's syndrome; lagrining; memory; brain damage; senile dementia; inflammatory disorder; arthritis; allergy; gout; organ transplant;
                                                                                                                                                                                                                                                           New nucleotide derivatives having energy transfer function - contain reporters to serve as donor and acceptor, useful in chain termination DNA base sequencing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This peptide motif is present twice in novel mouse Mena (mammalian Ena) protein (see AAW37148) and once in novel mouse Ena-VASP-like Ev1 protein (see AAW37149). It mediates binding to the actin-monomer sequestering protein profilin. The invention relates to disclosed Mena and Ev1 genes (see AAW02966-98) and proteins (see AAW37148-53), and a variety of methods and compositions used for screening, isolating and characterising endogenous and exogenous factors, drugs and therapeutic agents useful to evaluate and/or control cytoskeletal dynamic events involved in normal and abnormal cell morphology, adhesion, motility, growth and/or differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detection of modulators of Mena and Ena-VASP-like genes and proteins - used in control of cytoskeletal dynamic events in normal and abnormal cell morphology, adhesion, motility, growth and

The invention relates to a method of preventing mammalian cell migration, comprising inducing a functional Ena(enabled)/vasodilator-stimulated phosphorotein (VASP) or promoting cell migration comprising depleting functional Ena/VASP protein in the mammalian cell. The method is useful for preventing or promoting mammalian cell migration, preferably tumour cell migration in vitro or in vivo and to prevent tumour cell metastasis in a subject. An Ena/VASP activator or inhibitor is useful for promoting wound healing, preferably fibroblasts or nerve cells of a tissue type with the inhibitor to promote actin polymerisation and tissue formation on a scaffold. The inhibitor is also useful for preventing con a scaffold. The inhibitor is also useful for preventing neurodegeneration such as in Alzheimer's disease, bown Syndrome, cramma, Huntington's disease, epilepsy, ALS-Parkinsonism-dementia complex, progressive supranuclear palsy, progressive bulbar palsy, crebbellar degeneration, Tourettes syndrome, hypoglycaemia, hypoxia, crebbellar degeneration, Tourettes syndrome. The Ena/VASP cerbbellar degeneration, Tourettes syndrome, hypoglycaemia, hypoxia, crebbellar useful for enhancing learning and memory in a subject having or at risk of developing a learning and memory in a subject having or at risk of developing a learning and memory in a subject having or at risk of developing a learning and memory is administered in an amount for inhibiting the activity of Mena in a synapse. Ena/VASP activator is useful for disrupting learning and memory or proved and ministered in an amount for inhibiting the activity of Mena in a synapse. Ena/VASP activator is useful for adisrupting learning and memory in a proved or and the activator is useful for adisrupting learning and memory or proved in an amount for inhibiting the activity of Mena in a monther to promote Ena/VASP proved in an amount partivity or an amount partivity or activity or more and partivity or more and memory and and memory and the activator is administered in an amount 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disorders such as arthritis, allergy, gout, organ transplant, ulcerative collitis and ischaemic diseases and also for treating cancer metastasis. The present sequence represents the amino acid sequence of Ena/VASP homology (EVH) proline-rich motif #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein-FE65 interaction. Inducing the activity of Ena/VASP protein in immune or haematopoietic cells reduces the ability of the cells to migrate and this is useful for treating and preventing inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

from a viral protein. This domain promotes the release of viral proteins from a viral protein. This domain promotes the release of viral proteins from membranes and is used as part of a fusion protein. The invention relates to a novel toxin (e.g., ricin) based antiviral agent which is toxic to virus infected cells, but non-toxic to uninfected cells. The invention has anti-HIV and virucide activities. Its mechanism of action is through inactivation of cellular ribosomes and enhancement of binding of the antiviral agent to galactose residues on cell surfaces, and its cellular internalisation. The invention is useful for treating human immunodeficiency virus infection and other viral infections, especially retroviral infections. The antiviral agent is activated in viral particles or early-stage infected cells, killing the cells upon infection and effectively preventing the integration of the viral genome into the host genome thereby preventing the latency/rebound problem. The agent cells all HIV susceptible cells, and not just cells known to act as host cells for the virus. The antiviral agent remains inert in a cell until cells in the virus, where the
                                                                                                                                                                                                                                                                          Novel composition comprising toxin e.g., ricin based antiviral compound useful for treating viral infections such as human immunodeficiency virus infection.
                                                                                                                                                                                                                                                                                                                                                                                       The sequence relates to the amino acid sequence of an "L domain" taken

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The specification describes a nucleic acid molecule, comprising a polynucleotide encoding 5 contiguous amino acids of a naturally-occurring adenovirus (Ad) polypeptide, where the polynucleotide is not a naturally-occurring adenoviral nucleotide sequence and is useful for creating complementing cell lines that enable the efficient production of high titer Ad vectors. The nucleic acid molecule is useful for creating Ad-complementary cell lines which are useful for high yield production of recombinant replication-incompetent Ad vectors, in the absence of detectable replication competent Ad. The adenoviruses free of contamination with RCA are suitable for preclinical and clinical use. El-deleted viruses are suitable for applications in which transgene expression is therapeutic (e.g. p53 gene transfer in cancer, beta-interferon gene transfer in cancer, platelet derived growth factor (PGGF) gene transfer in wound healing, and vascular endothelial growth factor (VEGF) gene transfer in wound healing, and vascular endothelial growth factor construct an El complementation element, for use in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Colostrinin; immune response; cytokine; blood cell proliferation; central nervous system disorder; neurological diosrder; mental disorder; dementia; neurodegenerative disease; Alzheimer's disease; psychosis; neurosis; infection.

The peptides have immune response modulatory activity, and are capable of inducing cytckines. Colostrinin and its derived peptides are useful for inducing cytckine production, for modulating an immunological response and for inducing blood cell proliferation. The peptides are useful in the treatment of disorders of the central nervous system, neurological Alzheimer's disease, motor neurone disease, psychosis, neurological disorders of the immune system, bacterial and viral infections and acquired immunological deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modulating oxidative stress level in a cell, involves contacting the cell with an oxidative stress regulator selected from colostrinin, its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
0
              stress level in a cell or a patient, comprising contacting the cell with, or administering to the patient, an oxidative stress regulator selected from colostrinin, or its constituent peptide (e.g. the present peptide), to change the level of an oxidishing species in the cell. The method can be used to treat oxidative damage to skin, by decreasing or preventing an increase in the level of damage to a biomolecule of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for promoting neural cell adifferentiation and treating damaged neural cells, using colostrinin and colostrinin constituent peptides (e.g. the present peptide) as a neural cell regulator. Colostrinin is a polypeptide complex found in colostrum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of colostrinin, its constituent peptide or analog as a neural cell regulator, for promoting neural cell differentiation and treating damaged neural cells in a patient
The present invention relates to a method for modulating the oxidative
                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the development of a child's immune system, as a dietary supplement, and to promote the dissolution of beta-amyloid plaques.

The present sequence represents an analogue of a peptide hormone named trypsin modulating oostatic factor (TMOF). Mosquitoes regulate trypsin and trypsin-like enzymes with this hormone to conserve metabolic energy. Other insect pests use if for the same purpose. The peptide functions as a pesticidal compound, which inhibits digestion in pests by inhibiting synthesis of pests digestive enzymes. The pesticidal compound is useful for preventing, reducing or eliminating infestation of geographical areas by an insect population such as flesh flies, fleas, sand flies, house flies and dog flies. The pesticidal compound is applied to pest inhabited loci of the geographical area such as the body of water inhabited by mosquito larvae, or insects such as coleopterans, cupterans or blood-sucking insects of order Diptera, suborder Nematocera, family Colicidae or subfamily Culicinae, corethrinae, Ceratopogonidae and Simulidae.
                                                                                                                                                                                                                                                              New polypeptide is useful for preventing, reducing and eliminating infestation of area by pests e.g. flesh flies or mosquito larvae, optionally in combination with e.g. repellent, attractant, acaricide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 24; DB 22; Length 5;

         ŏλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimide groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3:50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases.

ABB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó
                                                                                                                                                                                                                                                                                                                                                  Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hormone; trypsin modulating oostatic factor; TMOF; analogue; mosquito; trypsin, trypsin-like enzyme; metabolic energy; insect pest; pesticide; digestion; digestive enzyme; flesh fly; flea; sand fly; house fly; dog fly; coleopteran; lepidopteran; dipteran; blood sucking insect;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequences represented by AAR80046 and AAR80048-R80059 are substrates for the novel peptidase of the invention. The peptidase hydrolyses P-P-P. and P-P and recognises the proline at the second residue from the N-terminal of a peptide to reases the N-terminal amino acid. The enzyme's activity is stimulated with MnOl2 and inhibited with orphenanthroline and 2-mercaptoethanol. The peptidase is useful for the hydrolysis of proline containing physiologically active peptidas, oligoproline and proline rich proteins in the living body, particularly in the brain of mammals. The peptidase is useful for the prevention and treatment of proline rich protein related diseases and study of cerebral
                                                                                                                                                                                                                                                                                Gaps
                                                                                                               of
                                                                                          This peptide is one of 10 claimed peptides having prolyl endopeptidase inhibitory activity; the peptide is expected to be of use for the prophylaxis and treatment of dementia. The peptide can be prepared by hydrolysis of gamma-zein from corn or by standard peptide synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         140 kDa peptidase hydrolyses proline rich proteins - useful for prevention and treatment of diseases related to proline rich proteins and studies of cerebral functions
                                                                                                                                                                                                                                                                              .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequences represented by AAR80046 and AAR80048-R80059 are substrates for the novel peptidase of the invention. The peptidase hydrolyses P-P-P, and P-P and recognises the proline at the second residue from the N-terminal of a peptide to release the N-terminal amino acid. The enzyme's activity is stimulated with MnCl2 and inhibited with o-phenanthroline and 2-mercaptoethanol. The peptidase is useful for the hydrolysis of proline containing physiologically active peptides, oligoproline and proline rich proteins in the living body, particularly in the brain of mammals. The peptidase is useful for the prevention and treatment of proline rich protein related diseases and study of cerebral
                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   140 kDa peptidase hydrolyses proline rich proteins – useful for prevention and treatment of diseases related to proline rich proteins and studies of cerebral functions
                                                                                   ő
